M2S Laboratory

Animove

Biological and medical research needs animal experiments to improve its knowledge. Currently, it is not possible to satisfactorily mimic the effects of physical exercise “in vitro”. Animal research is then a relevant solution to evaluate such effects. In this animal experimentation platform, animals are housed in a room with A1 / A1+ (EOPS) health status with open racks. Experiments are planned with respect to the room use plan and any form of livestock cannot be performed.

Species housed in the platform: Mouse and rat
