

M2S Laboratory

**Animove**

Biological and medical research needs animal experiments to improve its knowledge. Currently, it is not possible to satisfactorily mimic the effects of physical exercise “in vitro”. Animal research is then a relevant solution to evaluate such effects. In this animal experimentation platform, animals are housed in a room with A1 / A1+ (EOPS) health status with open racks. Experiments are planned with respect to the room use plan and any form of livestock cannot be performed.

**Species housed in the platform:** Mouse and rat
